/ Introduction

DA200 series high performance AC servo system is an INVT flagship product that is developed according to market needs and aims at assisting customers in industry upgrade. Applying the leading control performance to actual industrial needs achieves a perfect combination of the servo system and application environment.

Servo product family

Comprehensive product series support various networks and matching devices, facilitating the construction of required systems.

Drive layer

DA180 basic AC servo system

DA200 high performance AC servo system

DA300 intelligent AC servo system

DA212 dual-axis AC servo system

DA213 triple-axis AC servo system

MH800 electrohydraulic servo system

SL330 ELO and dual-ETO system

SL320 ELO and ETU system for loom

SL310 ETO system for loom

Execution layer

Small power servo motor

Medium power servo motor

Servo fluid-cooled spindle motor

Synchronous motor

Outstanding product performance

Industry-leading speed response

The speed response frequency can reach 2.0kHz, improving the processing rate and reducing the tuning time, with the full use of advanced mechanical performance.

3 times
of a common product
2kHz

Accurate positioning

The support for the 23-bit encoder with the 0.15 arcsecond resolution achieves accurate positioning, stable machining at low speed, and bright and clean machined surface. The use of an absolute encoder ensures the motor will not lose the position origin in case of power-off.

Applicable to scenarios that require absolute positions with high rigidity, such as robot, LED optical splitter, high speed drilling center, warp knitting machine, engraving and milling machine, turning and milling combined machine, and tool servo.

64 times
of a common product
23 bit

Enriched communication interfaces

Networking based on Modbus, CANopen, PROFINET, or EtherCAT achieves remote, multi-shaft, high-speed, synchronous control.

Abundant practical function

Fully-closed loop control

Support for external connection to an encoder or grating ruler installed at the load end, implementing fully-closed loop control, reducing back clearance impact caused by mechanical drive, and improving machine-end positioning accuracy.

Internal position control

Achieving 128-segment internal position control with combination of input terminal commands (external I/O or bus control). For simple motion control, the internal program design can help simplify the PLC and optimize the external configuration plan.

PIP0.00	Control word of segment 00	Setting range	Default	Unit	Control mode
		0-0x7FFFFFFF	0	-	P

Overall description

Data bit	Name	Function
Bit0-3	MODE	PTP running mode.
Bit4-7	OPT	Segment attribute.
Bit8-11	ACC	ACC/DEC time index.
Bit12-15	SPD	Target speed index.
Bit16-19	DLY	Delay time index.
Bit20-23	CYL	Segment execution cycles.
Bit24-30	JMP	Jumps to the next segment.

Description for MODE

MODE	Meaning
0	Stops after executing the current segment.
1	Jumps to the next segment after executing the current segment.
2	Stops after circular execution. If CMD is 1, circulation is invalid.
3	Jumps to the next segment after circular execution. If CMD is 1, circulation is invalid.

Description for OPT

Data bit	Name	Function
Bit4	INS	Insertion. The current segment has the execution termination privilege over segments that are being executed or not executed.
Bit5	OVLP	Overlap. The current and next segments can be overlapped for execution.
Bit6-7	CMD	Position command type. 0: incremental position; 1: absolute

Electronic cam

- The cam profile can consist of 3600 points.
- Automatic smooth interpolation can be implemented between two points of a curve, making mechanical motions more smooth.
- The ServoPlover software supports cam planning and setting.
- Applicable to master/slave application scenarios such as flying and rotary shears.

Linear motor control

Support for control on linear motors, including those without magnetic sensors. After magnetic pole detection is enabled, the motor executes minor FWD-and-RVS motions for detection. After the detection is completed, the servo is ready for motion control.

Function description

To work with 3rd-party linear motors, position sensor signals should be 5V differential ABZ signals. The maximum allowed pulse signal frequency of the drive is single-channel 3MHz or orthogonal 12MHz. Magnetic sensor signals (optional) support differential input.

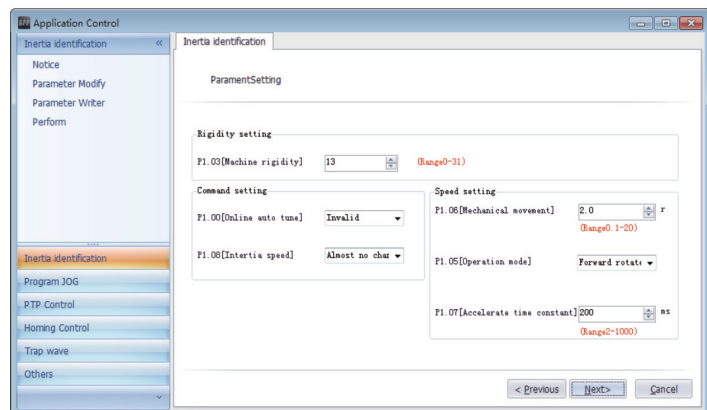

Features

If a linear motor without magnetic sensors is used, it executes first power-on or using magnetic pole detection signals. The minor FWD-and-REV motions for the pole detection after the rotor moving range is within 2mm (configurable). The internal stalling protection function ensures linear motor safety. The ASR bandwidth can reach 1kHz or higher, and the position tuning time is less than 5ms.

Load inertia identifying

Providing online and offline inertia identifying. Automatically identifying gain parameters in the system reduces system tuning time.

Intelligence

Automatic/manual notch filter

Simplified notch filter setup achieves automatic vibration detection without vibration frequency measuring.

Abnormal noise and vibration caused by mechanical devices can be greatly reduced by using a notch filter.

DA200 series product carries four notch filters, each of which has frequency designated to 50Hz –5000Hz and adjustable depth. (Two of the filters can be automatically set.)

Low frequency vibration control

Special low frequency vibration control algorithms can be used to effectively control low frequency mechanical resonance and control oscillation at long swing arm end.

Vibration control is not conducted

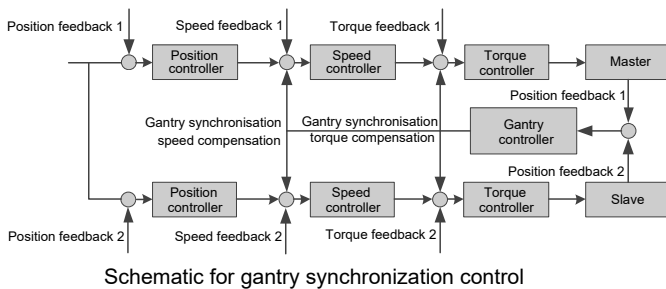

Vibration control is conducted

■ Gantry synchronism

Support for dual-shaft alignment and synchronous following. The controller conducts synchronous control automatically without the complicated upper PC control. When position deviation exceeds the allowed value, an alarm is reported to stop system running.

■ Disturbance control

Equipped with the disturbance control function to compensate for the control performance impact caused by load disturbance and parameter changes, enhancing system robustness and greatly improving command following performance.

■ Friction torque compensation

Equipped with the friction torque compensation function to reduce the impact caused by static friction during motor commutation and improve command following performance at low speed running.

■ Simple gain adjusting and switching

The speed and position loop gains and filter time constant can be automatically adjusted by setting rigidity levels, effectively reducing commissioning complicity.

Two groups of gain can be set, and the gains can be switched through I/O input, communication, or internal variables, fulfilling flexible process demands.

■ Speed observer

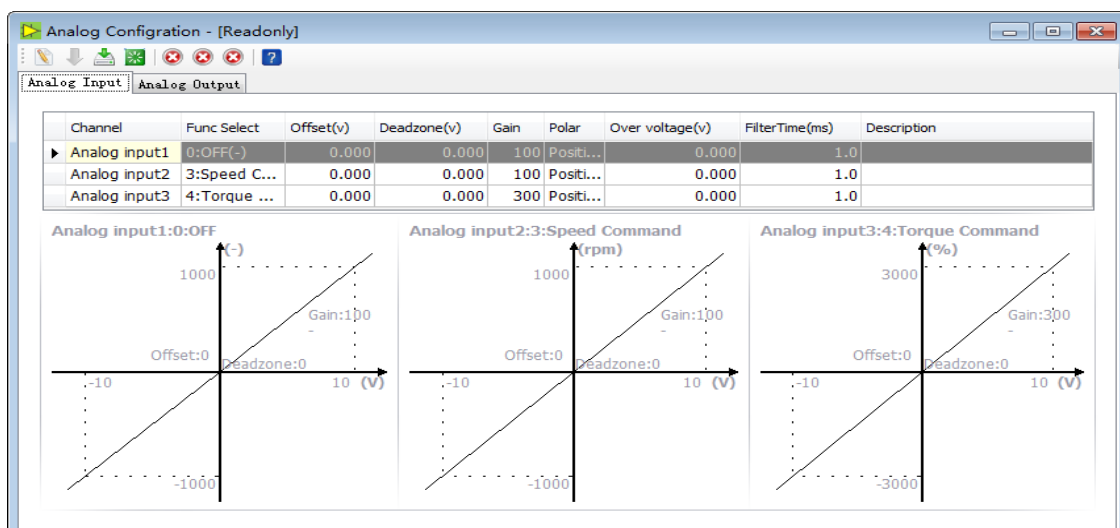

Using a speed observer to reduce the noise signal impact and improve command following performance.

User-friendly operation software

- Convenient and friendly user interface
- Enriched functions, easy to use
- Built-in instruction manual, practical for commissioning

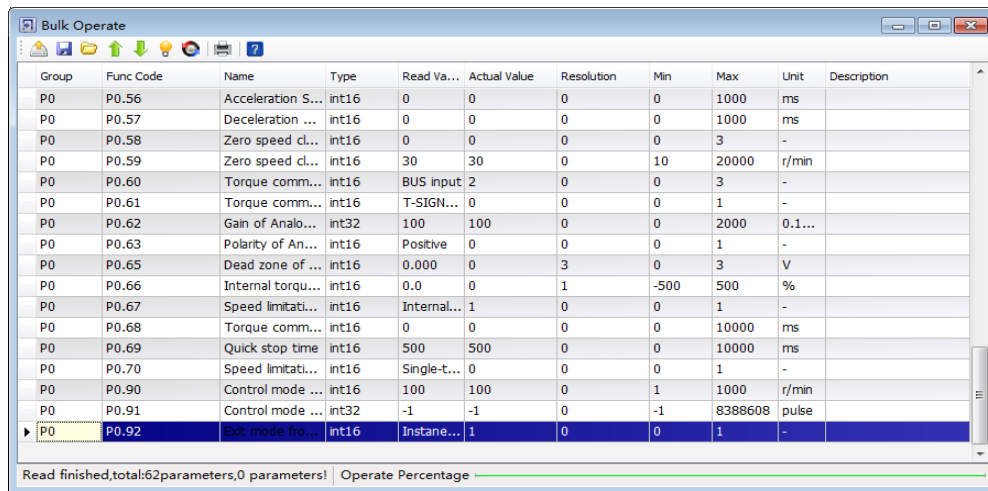

Digital I/O can directly select effective terminal logic and function distribution

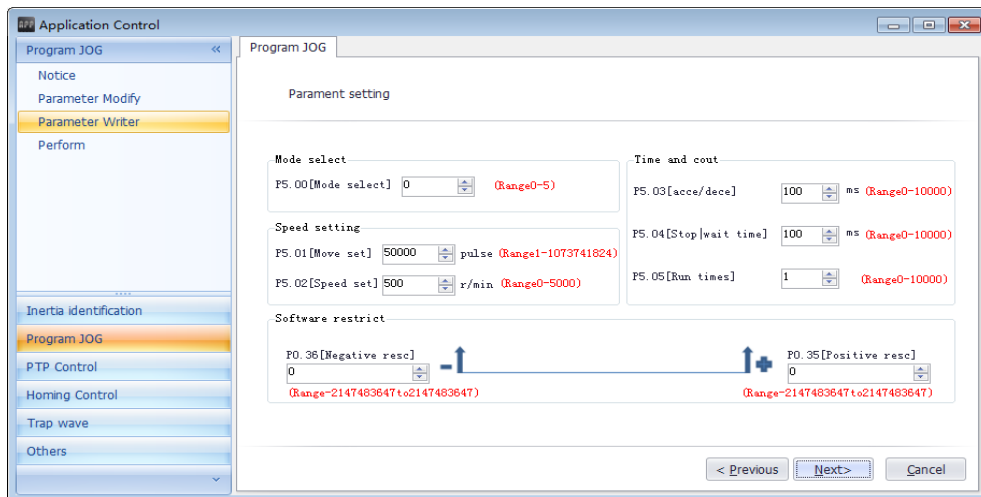

Analog I/O can set parameters such as gain, zero offset and deadzone, as shown above

Display fault info. in real time and read fault record info.

Bulk reading function can store parameters to files for easy parameter copying

Abundant application control function for convenient pilot run and commissioning

/ Application cases

Mechanical arm/Robot

Function description

- High speed and accuracy: DA200 EtherCAT bus servo uses the 23-bit absolute encoder, achieving the repeated positioning accuracy of $\pm 0.01\text{mm}$ and the response frequency of 2.0kHz.
- High rigidity and flexibility: The high speed and accuracy control on continuous tracks in three dimensions ensures flexibility and accuracy of robot motions, applicable to processes such as high-efficiency dispensing, soldering, cutting, and coating, and compatible with any articulated robot controller.
- Automatic gain adjusting achieves optimum servo performance for each joint.

LED die bonder

Function description

- DA200 supports linear motors, no need for intermediate drive, featuring stronger torque output, quicker dynamic response, and greater ACC, making full use of advanced mechanical performance.
- Improving the die bonder production efficiency through the quick high-accuracy positioning and repeated positioning with the accuracy improved through linear position detection closed-loop feedback control.
- Achieving comprehensive vibration control and excellent disturbance control: fully-closed loop vibration control, low frequency vibration control, disturbance control friction torque compensation, and manual/automatic notch filter.
- Die bonding cycle reduced to 100ms.

Lithium cell winding

Function description

- DA200 EtherCAT bus, with high speed and real time features, supports a maximum of 64 axes, meeting control requirements on winding and soldering machines, and improving assembly efficiency.
- Integrated unwinding and rectification program and excellent algorithms, achieving quick winding, high accuracy cutting, with less tension fluctuation, stable constant linear speed control improving action response.
- Built-in electric cam, easily achieving variable/constant speed winding and quick type change through one key without setting any winding needle dimension parameter.
- Nearby installation for remote I/O, reducing wiring and maintenance costs.
- Winding curves achieved completely through autotuning, without the need to set any winding needle parameters.

LED sorting machine

Function description

- Utilizing DA200 featuring high speed and excellent response can increase motor frequency width and improve the gains with quick dynamic response and short tuning time, optimizing overall running.
- Using the customized large torque motor with advanced algorithms can achieve high accuracy positioning control and low-speed stable running with high rigidity without microvibrations.
- The max. speed has reached 72K/h, highest level in the industry.
- Rotary table with large inertia, load rate slowed, motor temperature lowered, and noise reduced.
- Working efficiency improved by 80% and yield rate improved greatly.

Application cases

Fully auto SMT machine

Function description

- For excellent vibration control, DA200 can fully eliminate resonance and control vibration with quick response, ensuring the machine runs stably.
- Outstanding gantry dual-drive control algorithms ensure running accuracy.
- Excellent online position change function achieves real time change of target positions.
- The high speed and accuracy features help improve SMT production efficiency.

Glass engraving and milling machine

Function description

- Using DA200 to compensate for disturbance, friction, and reverse gap enables the machine to achieve cutting without marks and smooth lines and arcs.
- Excellent disturbance control compensates for load disturbance control and performance impact caused by parameter changes, improving system robustness and command following performance.
- Import of CADs for any graphs and auto optimization of glass cutting traces.
- 4MHz command pulse input.
- Intelligent gain adjusting and switching, implemented through one key.
- Built-in drive protection, featuring excellent environment adaptability and highly waterproof.

Servo drive technical parameters

DA200 series servo drive (100W–55kW)				
Specification		Description		
Power	220V system input voltage	1P/3P AC 220V(-15%)~240V(+10%) 47Hz ~ 63 Hz		
	400V system input voltage	3P AC 380V(-15%)~440V(+10%) 47Hz ~ 63Hz		
Port	Control signal	Input	10 inputs for standard type, pulse type and CANopen bus type; 7 inputs for EtherCAT bus type; 7 inputs for PROFINET bus type(functions can be configured via relevant parameters)	
		Output	6 outputs for standard type, pulse type and CANopen bus type; 4 outputs for EtherCAT bus type; 4 outputs for PROFINET bus type(functions can be configured via relevant parameters)	
	Analog	Input	3 inputs for standard type (one 16bit, two 12bit analog inputs) 2 inputs for non-standard type (two 12bit analog inputs)	
		Output	2 outputs (analog monitoring output)	
	Pulse signal	Input	1 input (mode: differential input or open collector)	
		Output	1 output (mode: differential output (A+, A-; B+, B-; Z+, Z-) or open collector output (A; B; Z))	
	2 nd encoder	Input	Incremental encoder interface (2nd encoder or grating ruler)	
	Communication	USB	1:1 communication upper PC software (standard)	
		RS485	1:n communication (standard)	
		CANopen	1:n communication (optional)	
		PROFINET	1:n communication (optional)	
		PROFIdrive	1:n communication (optional)	
	Safety terminal	EtherCAT	1:n communication (optional)	
STO		Safe Torque Off (comply with latest Euro safety standard) (optional)		
Control mode			1. Position control; 2. Speed control; 3. Torque control; 4. Position/speed mode switching; 5. Speed/torque mode switching; 6. Position/torque mode switching; 7. Fully-closed loop control; 8. CANopen mode; 9. EtherCAT mode	
Function	Position control	Control input	1. Residual pulse clearing; 2. Command pulse input disabled; 3. Electronic gear ratio switching; 4. Vibration control switching	
		Control output	Position complete output	
		Pulse input	Max. pulse input frequency	Photoelectric coupling: differential input 4Mp/s, open collector input 200kp/s
			Pulse input mode	1. Pulse+direction; 2. CW+CCW; 3. Quadrature encoding
			Electronic gear	1/10000 - 1000
		Filter	1. Command smooth filter; 2. FIR filter	
		Analog input	Torque limit	Can perform clockwise/anticlockwise torque limit separately
		Vibration control	Can control 5 - 200Hz front-end vibration and machine vibration	
Pulse output	1. Can perform any frequency division setting which is below encoder resolution rate; 2. B phase reversing function			

DA200 series servo drive (100W–55kW)				
Specification		Description		
Function	Speed control	Control input	1. Internal command speed selection 1; 2. Internal command speed selection 2; 3. Internal command speed selection 3; 4. Zero speed clamp	
		Control output	Speed reaching, etc.	
		Analog input	Speed command input	Can set to speed command input based on analog voltage DC ± 10V
			Speed limit input	Can carry out torque limit clockwise/anticlockwise separately
		Internal speed command	Can switch between internal 8–step speed based on external input control	
		Speed command acc/dec adjustment	Can set acc/dec time separately or set acc/dec of S curve	
		Zero speed clamp	In speed mode, zero speed clamp function can set to work in speed mode or position mode	
		Speed command filter	First–order delay filter of analog input speed command	
	Speed command zero drift control	Can carry out zero drift control against peripheral disturbance, precision 0.3mV		
	Torque control	Control input	Zero speed clamp input, etc.	
		Control output	Speed reaching, etc.	
		Analog input	Torque command input	Analog torque command input, can set gain and polarity based on analog voltage, precision 4.88mV
			Speed limit input	Can carry out analog speed limit
		Speed limit	Speed limit can be set via parameters	
		Torque command filter	First–order delay filter of analog input torque command	
	Torque command zero drift control	Can carry out zero drift control against peripheral disturbance, precision is 4.88mV		
	Internal position planning	Plan points	Can carry out 128–point internal position plan setting, support communication control positioning	
		Route setting	1. Position; 2. Speed; 3. Acc time; 4. Dec time; 5. Stop timer; 6. Various state output; 7. Running mode	
		Homing	1. LS signal; 2. Z phase signal; 3. LS signal+Z phase signal; 4. Torque limit signal	
	Protection	Hardware protection		Overvoltage, undervoltage, overcurrent, overspeed, overload, overheat, brake resistor overload, encoder fault, etc.
		Software protection		Storage fault, initialization fault, I/O distribution error, position deviation is too large, etc.
Protection and fault record		1. Can record up to 10 faults 2. Can record the key parameter value when fault occurred		
Environment	Temperature	Working temp	0 ~ 45°C	
		Storage temp	-20 ~ 80°C (Non frozen)	
	Working/storage RH		90%RH(no condensation)	
	IP level		IP20	
	Elevation		Below 1000m	
Vibration		≤5.88m/s ² , 10 - 60Hz (Do not work on resonance point)

Symbol	Optional parts
0	With oil seal but no brake
1	No oil seal or brake ⁽²⁾
2	With oil seal and permanent magnet brake
3	No oil seal but with permanent magnet brake ⁽²⁾
4	With oil seal and electromagnet brake ⁽⁴⁾
5	No oil seal but with brake ⁽²⁾

⑪

Symbol	Lot no.
xxxx	Manufacturer's product lot no. ⁽⁵⁾

Remarks:

- (1): A motor of base 40 supports only 2500-PPR and 17-bit absolute encoders.
- (2): For special models, the lead time will be longer than usual.
- (3): 17-bit multi-turn absolute encoders are applicable only to motors of base 40.
- (5): No need to fill in when selecting models for the first time.
- (4): When an electromagnetic brake motor is used, there is a clearance (of < 0.5°) in the rotating direction if the motor brake is closed. Pay attention to this in the vertical axis applications. There is no clearance when a permanent magnetic brake is used.
- (5): No need to fill in when selecting models for the first time.

Servo motor technical parameters

Motor specification (2500-PPR/multi-turn absolute/resolver)

VB-GND	/	X2.6	
PE	Metal shell	Metal shell	Weaving

Cable for 17- or 23-bit encoder used by base 110/130/180/200 motor

Wiring relation			
Signal	X1	X2	Core cable structure
SD+	X1.1	X2.2	Twisted pair
SD-	X1.7	X2.3	
5V	X1.5	X2.4	Twisted pair
GND	X1.12	X2.5	
VB-3.6V	/	X2.6	Twisted pair
VB-GND	/	X2.7	
PE	Metal shell	X2.1	Weaving

Resolver-type encoder cable

Wiring relation			
Signal	X1	X2	Core cable structure
SIN+	X1.1	X2.6	Twisted pair
SIN-	X1.7	X2.7	
COS+	X1.2	X2.5	Twisted pair
COS-	X1.8	X2.4	
R+	X1.5	X2.2	Twisted pair
R-	X1.12	X2.3	
PE	Metal shell	X2.1	Weaving

Connection ports

Note: Standard-type examples

Medium power range: 100W–5.5kW

Wiring diagram of main circuit terminal

- The user is required to make this emergency stop protection circuit.
- Add surge absorbing devices on both ends of the electromagnetic contactor winding.
- Input voltage range of 400V system: AC 380V(-15%)~440V(+10%)
- It is necessary to connect external regenerative brake resistor between terminal (+) and PB
- Connect output U, V and W to the drive according to the motor cable phase sequence of servo motor, wrong phase sequence will cause drive fault
- Be sure to ground the servo drive to avoid accident of electrical shock.
- The electromagnetic brake uses 24V power supply which should be provided by the user. Moreover, it must be isolated from the DC12-24V power supply which is used by the control signal.
- Pay attention to the connection of the freewheeling diode. Reversed polarity may damage the drive.

CN1

Applicable to the standard (pulse) type

Applicable to EtherCAT and PROFINET bus communication

CN3

CN3 terminal function			
Pin	Name	Function	Remark
1	GND_CAN	CAN chip power GND	See the table on the left for definition if used as 485/CAN; 485 and CAN use the same interface and each signal has two pins for multiple networking.
2	GND_485	485 chip power GND	
3	/	/	
4	RS485+	RS485 data+	
5	RS485-	RS485 data-	
6	/	/	
7	CAN_L	CAN data-	
8	CAN_H	CAN data+	

CN2

CN2 terminal function			
Pin	Name	Function	Remark
1	V+ /SD+	Parallel encoder V+/Serial encoder data+	Different encoders use different cables
2	W+	Signal of parallel encoder W+	
3	A+	Signal of parallel encoder A+	
4	A-	Signal of parallel encoder A-	
5	5V	Encoder power supply	
6	U+	Signal of parallel encoder U+	
7	V- /SD-	Parallel encoder V-/Serial encoder data-	
8	W-	Signal of parallel encoder W-	
9	B-	Signal of parallel encoder B-	
10	B+	Signal of parallel encoder B+	
11	U-	Signal of parallel encoder U-	
12	GND	Power ground	
13	Z-	Signal of parallel encoder Z-	
14	Z+	Signal of parallel encoder Z+	
15	/	/	

CN5

CN5 terminal function			
Pin	Name	Function	Remark
1	HWBB1+	Safety input 1+	Connect to grating ruler or 2 nd encoder
2	HWBB2+	Safety input 2+	
3	EXA+	Grating ruler (or 2 nd encoder) A+	
4	EXA-	Grating ruler (or 2 nd encoder) A-	
5	EX5V	Power+5V	
6	EDM+	Safety monitoring output+	
7	HWBB1-	Safety input 1-	
8	HWBB2-	Safety input 2-	
9	EXB-	Grating ruler (or 2 nd encoder) B-	
10	EXB+	Grating ruler (or 2 nd encoder) B+	
11	EDM-	Safety monitoring output-	
12	EX0V	Power GND, connect to internal GND	
13	EXZ-	Grating ruler (or 2 nd encoder) Z-	
14	EXZ+	Grating ruler (or 2 nd encoder) Z+	
15	/	/	

Diagram showing the terminal block for Inverter frame sizes A, B, and C. Labels include: Charge indicator, Main circuit power, Control circuit power, External regenerative brake resistor (optional), Motor, Grounding, S1 switch: STO selection, CN5: 2nd encoder and STO, CN3: 485/CAN, CN1: I/O control, and CN2: Encoder.

Frame sizes A, B, and C are the same in ports. Frame size B is taken for example.

Diagram showing the terminal block for Inverter frame size D. Labels include: Charge indicator, Main circuit power, Control circuit power, External regenerative brake resistor (optional), Motor, Grounding, S1 switch: STO selection, CN5: 2nd encoder and STO, CN3: 485/CAN, CN1: I/O control, and CN2: Encoder.

Frame size D

Connection ports

Note: Standard-type examples

Medium power range: 7.5kW–55kW

Wiring diagram of main circuit terminal

CN5

CN5 terminal function			
Pin	Name	Function	Remark
1	EXA+	Safety input 1+	Connect to grating ruler or 2nd encoder
2	EXA-	Safety input 2+	
3	EXB+	Grating ruler (or 2 nd encoder) A+	
4	EXB-	Grating ruler (or 2 nd encoder) A-	
5	EXZ+	Power+5V	
6	EXZ-	Grating ruler (or 2 nd encoder) Z-	
7, 9	EX5V	Power+5V	
8, 10	EX0V	Power GND, connect to internal GND	
11	HWBB1+	Safety input 1+	
12	HWBB1-	Safety input 1-	
13	EDM+	Safety monitoring output+	
14	EDM-	Safety monitoring output-	
15	HWBB2+	Safety input 2+	
16	HWBB2-	Safety input 2-	
17	OC_EXZ	Z phase open collector input	
18	OC_EXB	B phase open collector input	
19	OC_EXA	A phase open collector input	
20	-	Unused	

Remarks : The definitions of terminals CN1, CN2 and CN3 are the same for the small power models.

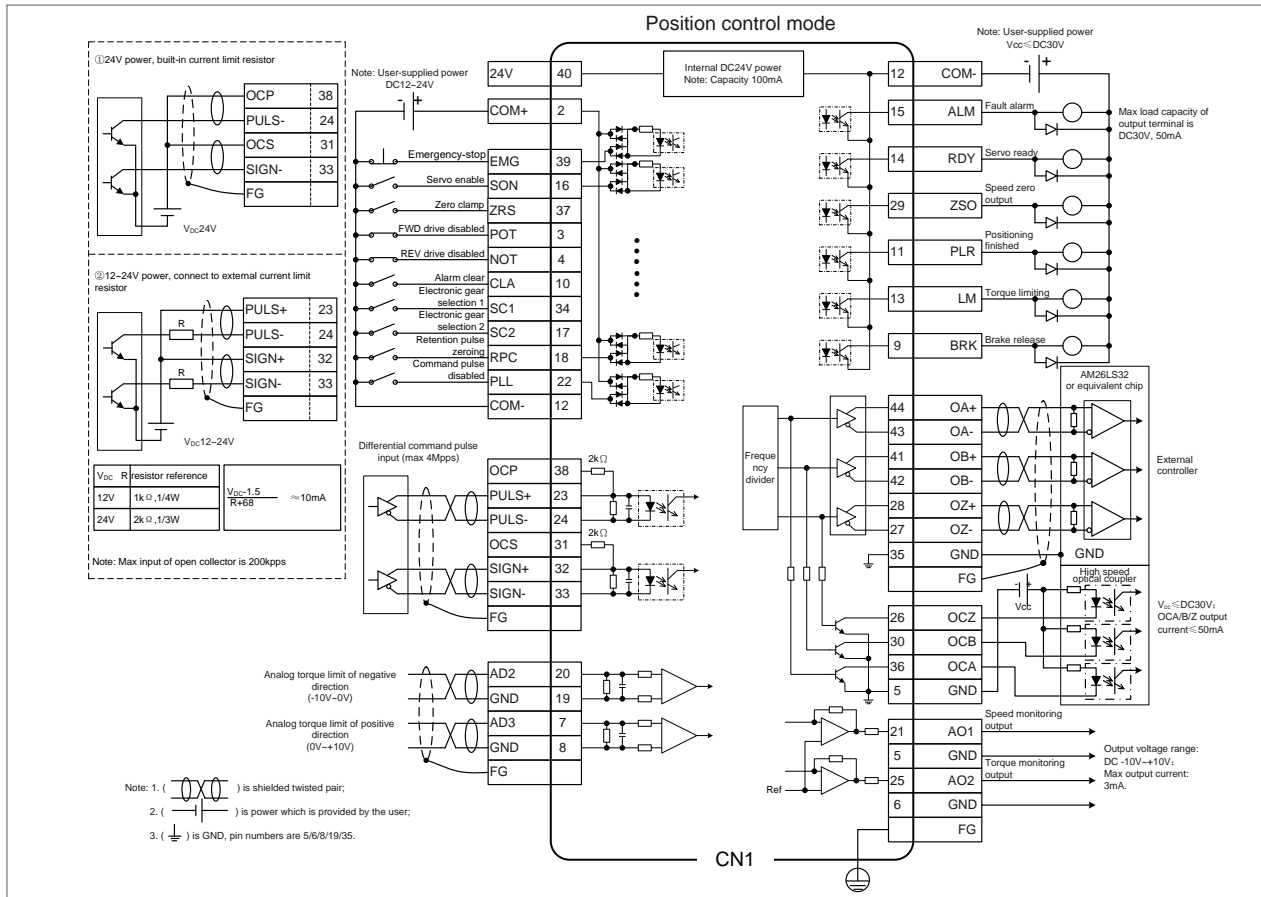

System wiring

Frame size B is taken for example.

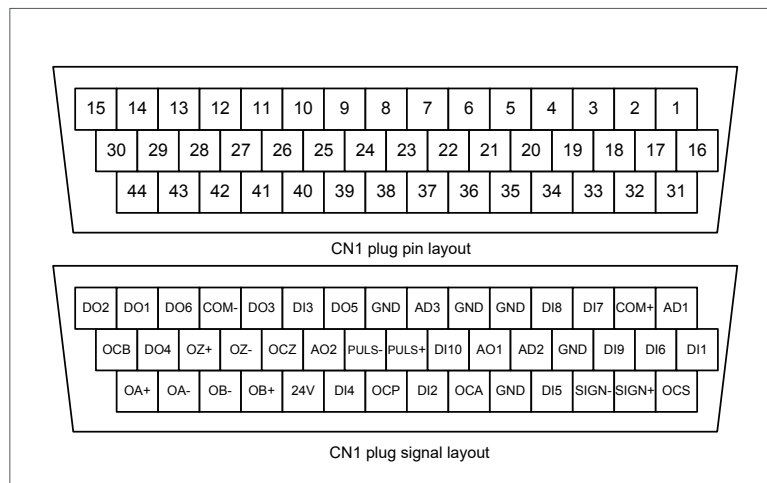

Standard wiring diagram

Wiring diagram of position mode (suitable for pulse input control)

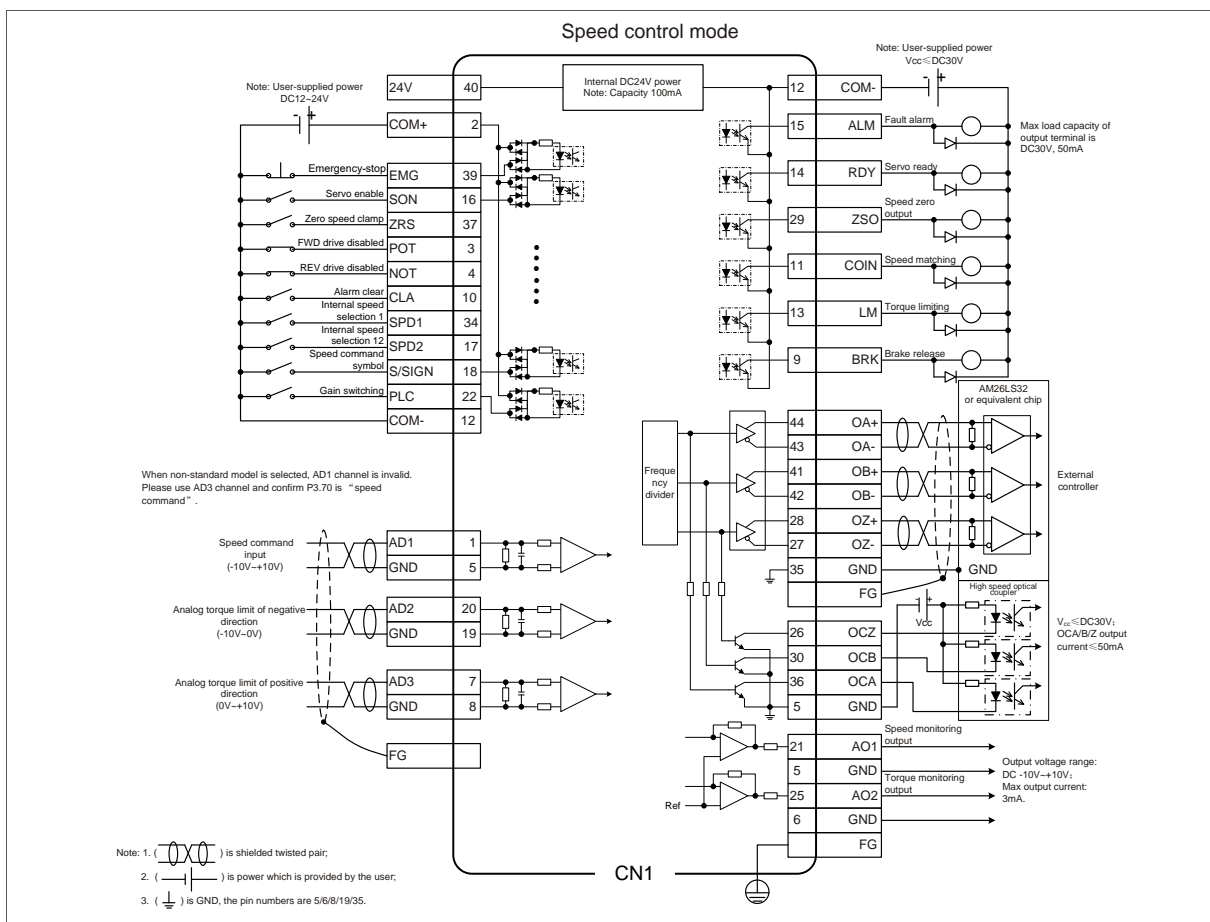

CN1

Standard wiring diagram

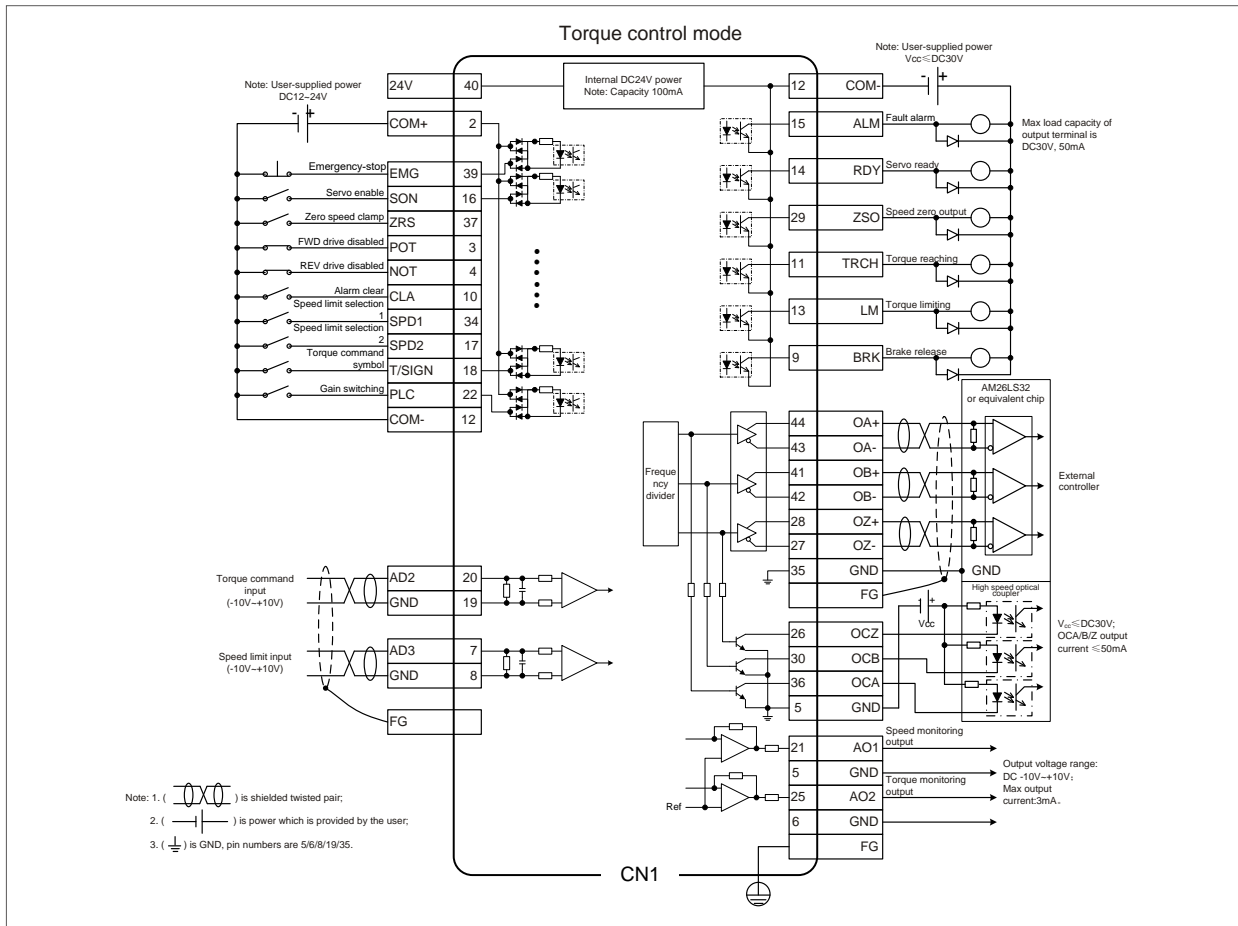

Wiring diagram of speed mode (suitable for analog input control)

Other INVT industrial control products

■ PLC

- Complete categories for wide applications
- Abundant extension modules for easy function extension
- Support for various communication protocols, flexible networking
- Compact size for easy maintenance

■ Linear motor drive

- Support for magnetic pole alignment of linear motors without auxiliary signal
- Support for various grating and magnetic rulers
- Stronger torque output and quicker dynamic response, without intermediate drive
- Closed-loop feedback control on linear position detection, with high accuracy positioning in short time and high dynamic rigidity
- Parameter unit consistency in commissioning interface, without conversion
- Short ACC/DEC and high efficiency of drive, without travel limit

■ Motion controller

- Various motion controller cards
- All series motion controller
- Robot control system
- Customized digital control system

■ Inverter

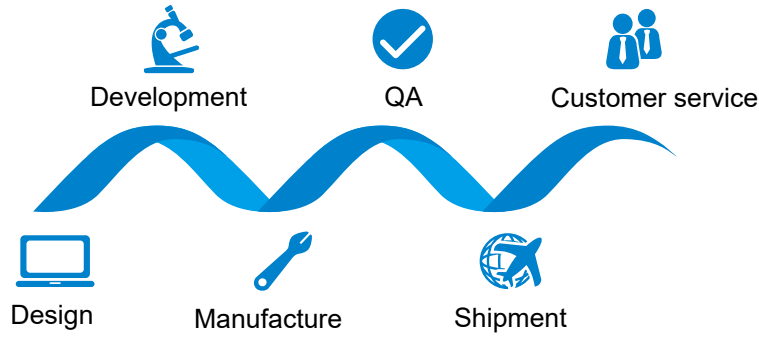

- The most comprehensive inverter lines in the industry, covering from low, medium to high voltage inverters
- Customized products based on customer needs are available

■ WS900 water-jet loom power control system

- Cost effective solution integrated with the loom controller, weft accumulator, ELO and ETU and spindle drive
- One touchscreen integrated with functions available in traditional three operation screens for loom power control, weft accumulator, and ELO and ETU, facilitating installation, commissioning, and monitoring
- Weft density can be changed when the machine speed changes, improving both weaving efficiency and quality. The system can be widely used to meet weaving requirements on various yarns and designs.

/"One-stop" service

/"Domestic service network

Comprehensive sales service coverage to provide fast response, including 30 domestic offices, growing overseas offices, warranty service centers and after-sale maintenance center
